What Is GAMIFANT?

GAMIFANT is a prescription medicine used for the treatment of adults and children (newborn and older) with primary hemophagocytic lymphohistiocytosis (HLH) whose disease has come back or progressed, or other medicines have not worked well enough or cannot be tolerated.

IMPORTANT SAFETY INFORMATION

GAMIFANT can cause serious side effects, including infections.

GAMIFANT is a medicine that affects your immune system and may lower the ability of your immune system to fight infections. GAMIFANT may increase your risk of serious infections that can lead to death. These infections include tuberculosis (TB), histoplasmosis, herpes zoster infection (shingles), and other infections caused by viruses, fungi, or bacteria that can spread throughout the body. Your healthcare provider will:

- Test you for TB before you start treatment with GAMIFANT
- Treat you with a medicine for TB if you are at risk for TB or if you have a known positive TB test. Infections are common in people treated with GAMIFANT

Before starting GAMIFANT, tell your healthcare provider all of your medical conditions and if you:

- Had TB in the past, or if you or a member of your family have been in recent close contact with someone with TB
- Have had a positive TB skin test (purified protein derivative test)
- Currently have an infection or have a history of infections, including histoplasmosis or herpes zoster (shingles)
- Are being treated for an active infection
- Have symptoms of an infection such as fever; sweat and chills; cough; breathing problems; blood in mucus (phlegm); or warm, red painful skin or sores on your body
- Are pregnant or plan to become pregnant. It is not known if GAMIFANT can harm your unborn baby
- Are breastfeeding or plan to breastfeed. It is not known if GAMIFANT passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with GAMIFANT

Please see additional Important Safety Information on page 3.

IMPORTANT SAFETY INFORMATION (continued)

Your healthcare provider will give you medicine to help prevent certain infections before you receive GAMIFANT.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

After starting GAMIFANT, tell your healthcare provider if:

- New symptoms of an infection appear
- Symptoms of an infection that you already had when starting GAMIFANT worsen. Your healthcare provider will monitor you closely for signs and symptoms of infections during treatment with GAMIFANT

GAMIFANT can cause serious infusion reactions.

These are common, can also be severe, and can happen during or shortly after treatment with GAMIFANT. Your healthcare provider may temporarily stop your infusion and treat your symptoms before continuing your infusion if you have severe infusion reactions. Tell your healthcare provider right away if you get any of the following symptoms:

- Skin redness
- Chills
- Itching
- Chest pain
- Fever
- Shortness of breath
- Rash
- Nausea or vomiting
- Excessive sweating
- Lightheadedness or dizziness

The most common side effects of GAMIFANT include high blood pressure (hypertension) and fever.

These are not all the possible side effects for GAMIFANT. For more information, ask your healthcare provider. You can also see the full Prescribing Information for GAMIFANT, including Patient Information at <https://gamifant.com/pdf/Full-Prescribing-Information.pdf>.

To report suspected adverse reactions, contact Sobi North America at 1-866-773-5274 or FDA at 1-800-FDA-1088.

Gamifant Cares is here to help

Gamifant Cares is designed to help families navigate the Gamifant treatment process and provide helpful information about what to expect during treatment, emotional support, financial assistance, and other resources and educational materials along the way. To access these resources, you can visit the link below:

Please see Important Safety Information on pages 2-3. [Click here](#) for Patient Medication Guide for Gamifant.

A dedicated Care Manager

Once Gamifant is prescribed and you are enrolled in Gamifant Cares, you will be connected with a Care Manager who can work with you and your healthcare providers to navigate and understand the insurance process.

Educational Resources

If you enroll in the Nursing Support Program, your Care Manager will connect you with a Sobi Nurse Case Manager who can provide educational resources about primary HLH to you and your loved ones.

Financial assistance

Gamifant Cares provides financial assistance information for eligible individuals. Your Care Manager can evaluate your eligibility for various programs.*

If you are uninsured or do not have coverage for Gamifant:

You may be eligible for our Patient Assistance Program.*

If you have commercial insurance:

You may be eligible for our Copay Assistance Program.

*Eligibility restrictions apply.
